

- O- Draw a line to connect each pair of boxes

This bond is formed by the transfer of electrons **Chemical Bond** between a metal atom and a non-metal atom. Compound formed when ions of ions of opposite **Ionic Bond** charges attract one another to form an ionic bond. Ions that donates Cation valence electron. Ion that received Ionic Compound electrons from a metal. This bond are formed when electron transfer or electron Anion sharing takes place.are formed when electron
